Install git on your Computer

Mac and Linux come with `git` already installed

For Windows:
`https://gitforwindows.org/`

Verify installation:

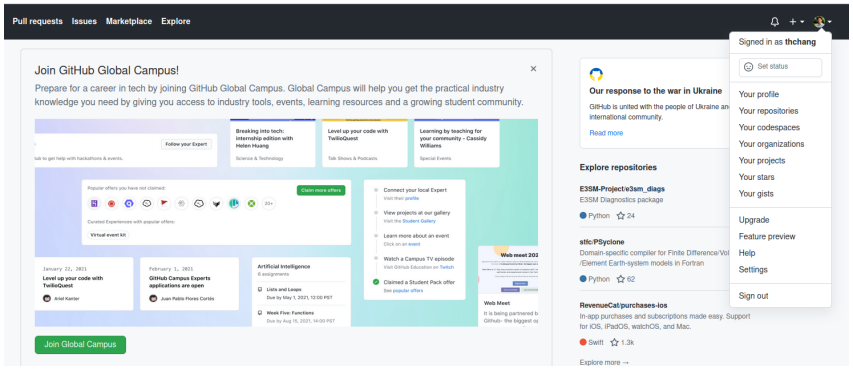
```
>>> git --version
```

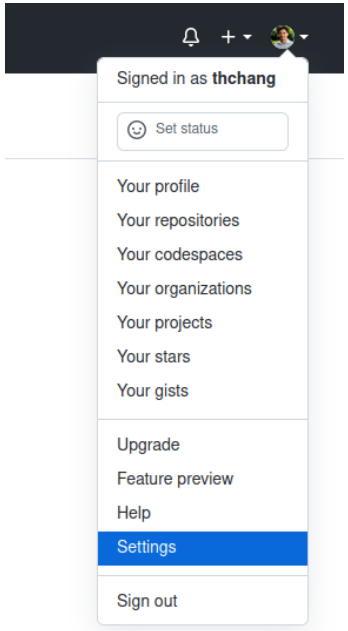
Create Your Profile

Click your profile picture in the top right corner and go to your profile to finish setting up your account:

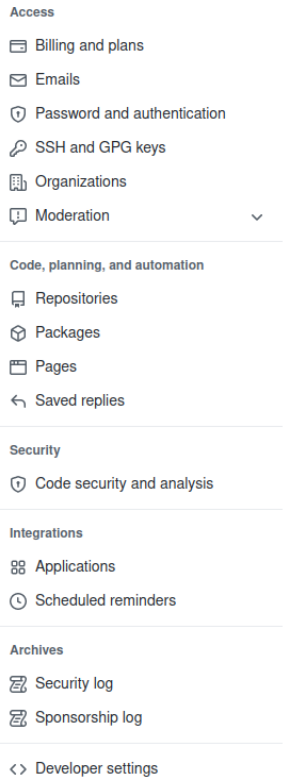


Go to Settings

When you're done, go to settings:

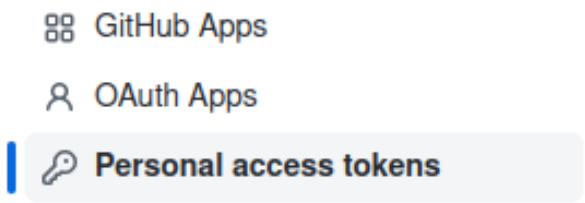


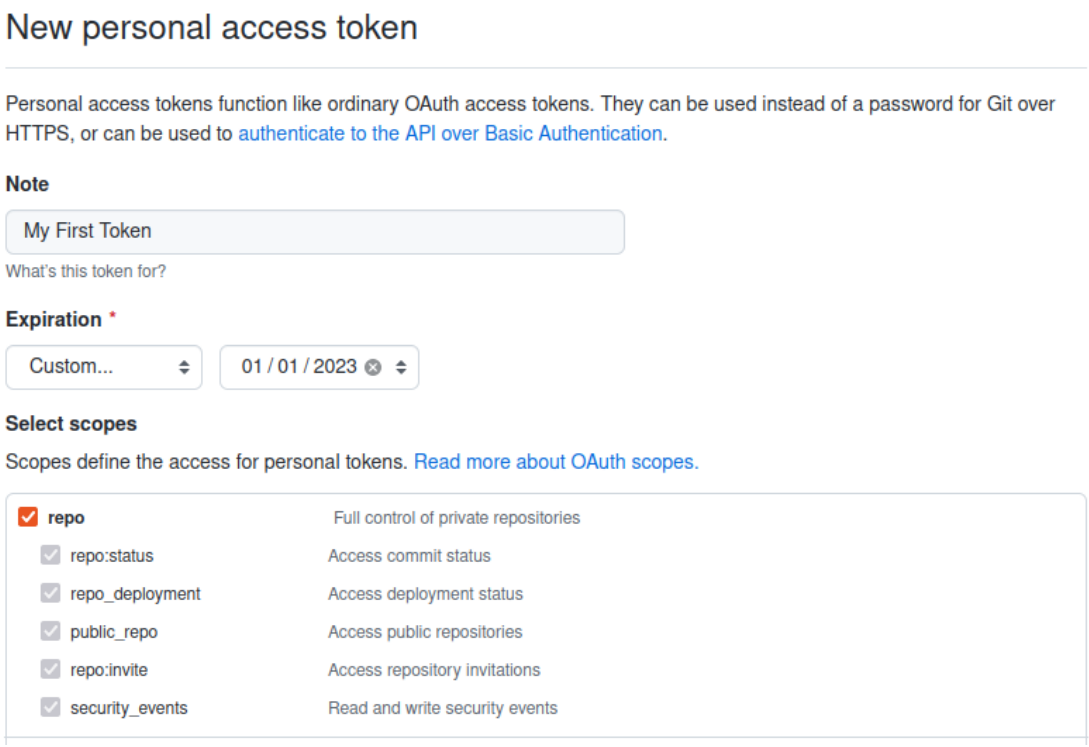
Developer settings



Token Tab

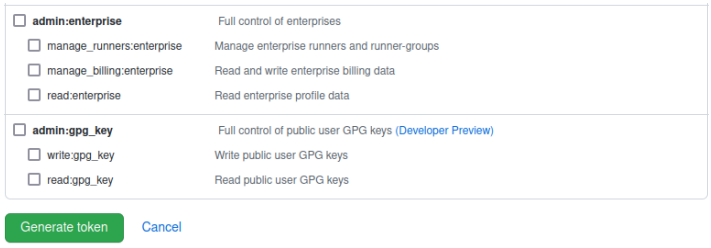
You need to generate a token to push changes from your computer (your password won't work):

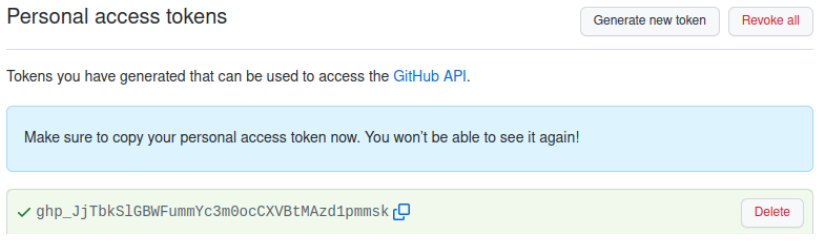


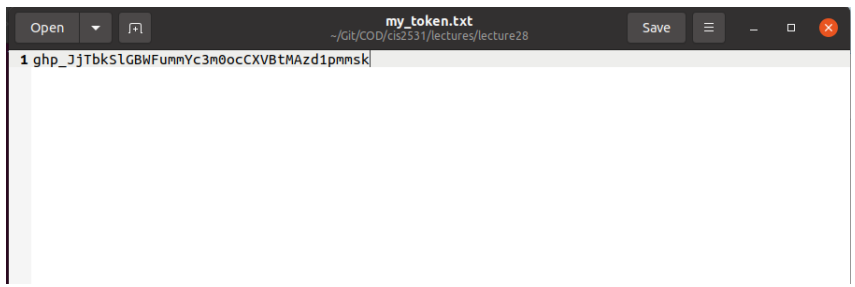


Generate Token

Save your token in a file

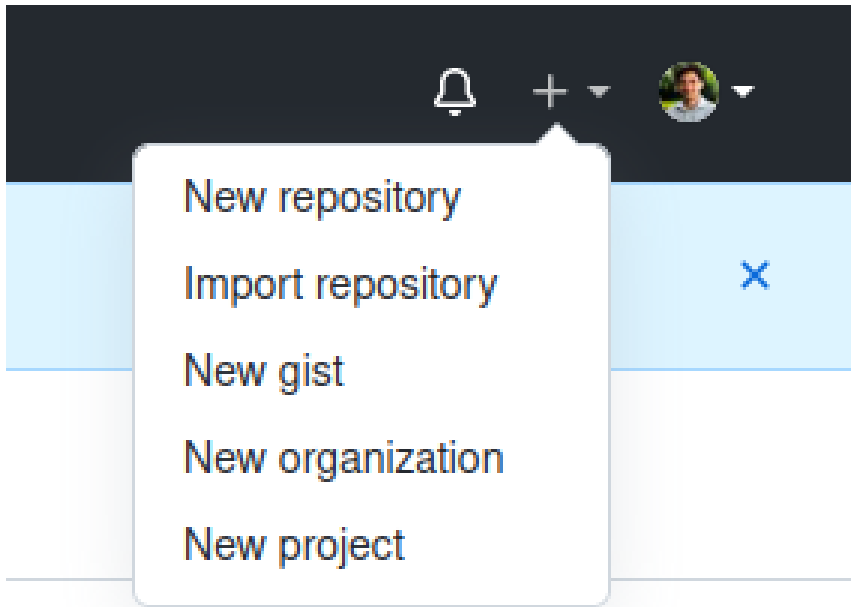




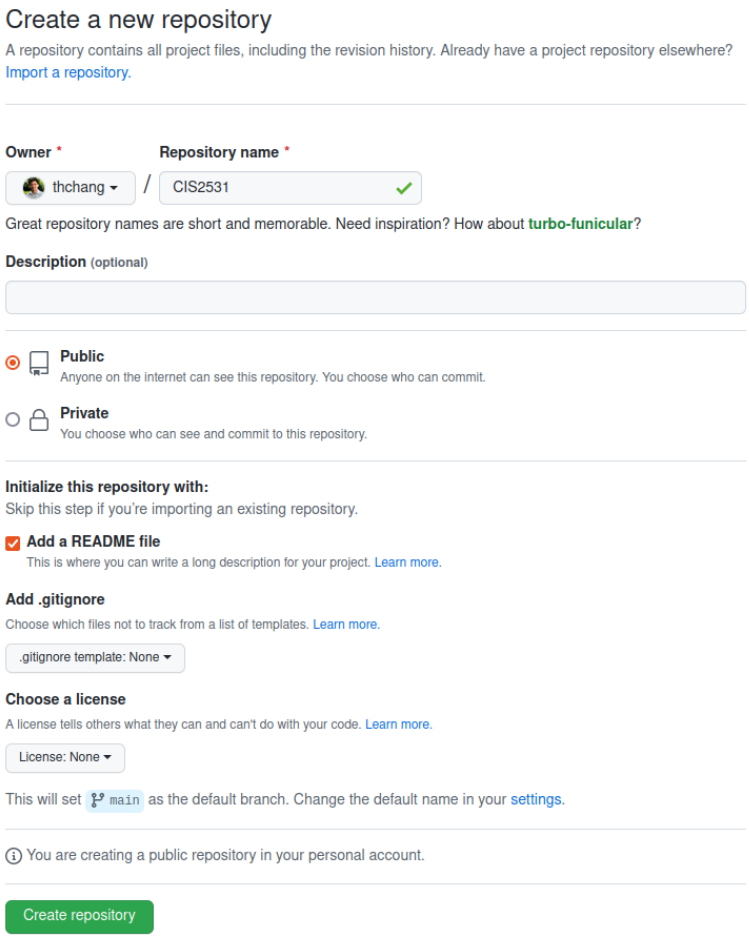


Create a Repo

Now create a new repo



Give Your Repo a Name



Clone your Repo on your local machine

```
git clone https://github.com/user-name/repo-name.git
```

Clone your Repo on your local machine

```
git clone https://github.com/user-name/repo-name.git
```

Replace `user-name` with your user name

Clone your Repo on your local machine

```
git clone https://github.com/user-name/repo-name.git
```

Replace `user-name` with your user name

Replace `repo-name` with your repo name

Clone your Repo on your local machine

```
git clone https://github.com/user-name/repo-name.git
```

Replace `user-name` with your user name

Replace `repo-name` with your repo name

This create a new directory (`repo-name`) in your current working directory
Create/copy all the files for your project inside that directory

Clone your Repo on your local machine

Clone your Repo on your local machine

Add files to your project:

```
# Welcome to my repo!

This is my first GitHub Uplaod!
```

Clone Other People's Projects

Clone Other People's Projects

You can clone other people's projects also using `git clone`

Clone Other People's Projects

You can clone other people's projects also using `git clone`

Of course, you won't be able to push changes

Clone Other People's Projects

You can clone other people's projects also using `git clone`

Of course, you won't be able to push changes

If you want to make changes, fork their project first to your own repo, then clone your fork

Link your GitHub

Once you have a couple projects, you should link your GitHub on your Resume:

Link your GitHub

Once you have a couple projects, you should link your GitHub on your Resume:

Tyler H. Chang
City: xxxxxx GitHub: `https://github.com/thchang`
email: xxx@xxx.xxx Phone: xxx-xxx-xxxx

Experience:
Professional Googler *at Google* (10 years)
· Googles stuff ... (on my personal laptop)
· Didn't actually work at Google
· May never have had a job at all?
